Protection for You and Your Computer

ZoneAlarm® Antivirus is a firewall and antivirus security solution to keep you and your computer protected from Internet risks. ZoneAlarm Antivirus keeps out hackers, viruses, worms, and other emerging threats.

It's easy to use and comes with out-of-the-box default security settings. Within minutes, you and your computer will be safe from Internet hazards and cybercriminals.

The ZoneAlarm community of users, people who place a priority on protecting their computer, number over 25 million.

Key Features of ZoneAlarm Antivirus:

Firewall

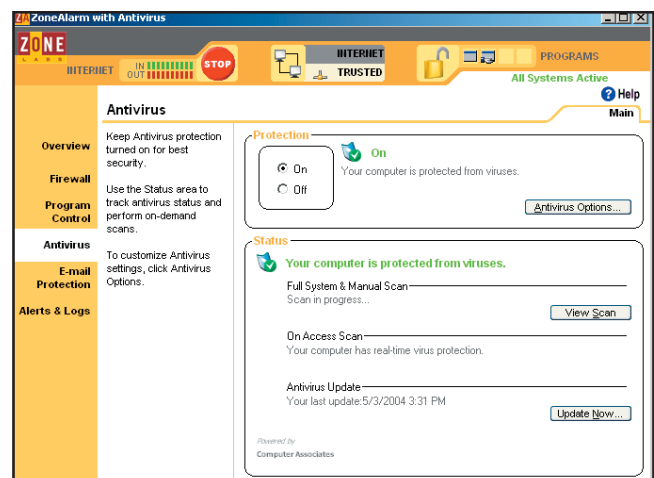

- **Intrusion Blocking** stops known and unknown threats
- **Stealth Mode** hides you and your PC from anyone on the Internet
- **Expert Controls** gives savvy users precise control over security settings

Antivirus

- **Critical Virus Detection/Removal** provides protection against viruses and worms, and when combined with a firewall, prevents known Trojans and identity-theft devices such as keyloggers

- **Multiple Automatic Scanning Options** automatically find viruses in e-mails, compressed files, and in files accessed by your PC (such as when a file is opened, accessed, written, or restored from disk)
- **Advanced Heuristic Detection** helps provide a first line of defense by using pattern-based technology to identify potential viruses even before they're turned into a major outbreak
- **Virus Bulletin's VB 100 Award** received for the past four years[1]

1] Award given to Computer Associates' Vet Antivirus, the technology Zone Labs uses.

ZoneAlarm with Antivirus' antivirus feature uses sophisticated logic to detect and remove viruses.

Automatic Program Configuration

- **NEW! Program AlertAdvisor** uses MD5 “fingerprinting” technology; tells you whether to allow/deny Internet access to programs requesting it, providing a safer and more user-friendly interface
- **Outbound Filtering** tells you when a program on your computer is trying to access the Internet and helps you avoid unauthorized and unknown programs from sending out your personal information

Automatic Program Configuration identifies programs by their MD5 “fingerprint” and provides advice on whether to allow or deny the program access to the Internet.

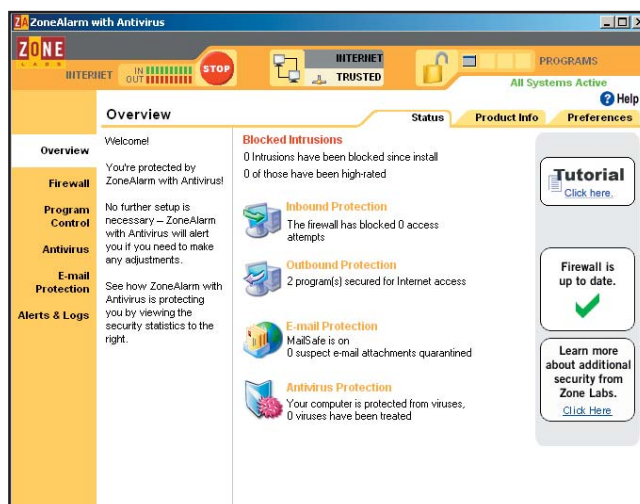

What is an MD5 signature?

An MD5 signature is the equivalent of a human fingerprint, but for computer programs. It is the process of sending a program through an algorithm that results in a unique message, or “fingerprint” for that specific program. No two MD5 signatures are identical.

Easy-to-Use

- **Pre-loaded Security Settings** provide easy, instant protection for anyone who wants “set and forget” security
- **Automatic Network Detection** ensures proper protection by identifying your computer’s connection to a new network
- **Automatic Update Notification** keeps your security up-to-date by alerting you when Zone Labs has an update to ZoneAlarm Antivirus

ZoneAlarm with Antivirus’ easy-to-use interface and out-of-the-box security settings mean your computer(s) will be protected in minutes.

Other Features

- **MailSafe** quarantines 47 types of suspicious e-mail attachments so you’re protected from sending or spreading e-mail-borne viruses
- **Outbound MailSafe** monitors outgoing e-mail for virus-like activity, such as sending an e-mail to everyone in your address book, and prevents such occurrences
- **Antivirus Monitoring** alerts you when your antivirus program is turned off, or its definition files are out-of-date, to make sure your PC is always up-to-date on its protection; Works with Symantec, McAfee, Trend Micro, and Computer Associates antivirus products, as well as with Zone Labs’ antivirus features
- **Wireless Network Protection** detects when your computer connects to a wireless network, making wireless convenience safe and eliminating risks posed by wireless access
- **Password Protection** prevents friends/family, or others who may use your computer, from tampering with the security settings

System Requirements

- Windows® 98SE/ME/2000 Pro/XP
- 233 MHz Pentium or higher
- 50MB of available hard disk space
- Internet access
- Minimum system RAM: 48MB (98SE/ME), 64MB (2000 Pro), 128MB (XP)
- Supported protocols for e-mail scanning
 - POP3 and IMAP4 for incoming e-mail only
 - SMTP for outgoing e-mail
 - IMAP 4 is not supported for antivirus e-mail scanning
