Datasheet

Advanced Internet Security & Privacy Protection

ZoneAlarm[®] Pro incorporates award-winning firewall technology with privacy features to help keep you and your computer safe. ZoneAlarm Pro blocks hackers, data thieves, worms, and over 47 types of malicious e-mail attachments. It also helps you retain your privacy by blocking cookies, cleaning your cache, and protecting your personally-identifiable information from accidentally being transmitted across the Internet without your permission.

ZoneAlarm Pro is compatible with major antivirus software and Windows[®] operating systems (Windows 98SE, ME, 2000, and XP).

See why over 30 million people trust their computers' security to the ZoneAlarm family of products.

Key Features of ZoneAlarm Pro:

Firewall

- **Intrusion Blocking** stops known and unknown threats
- **Stealth Mode** hides you and your PC from hackers
- **Expert Controls** gives savvy users precision control over granular firewall rules

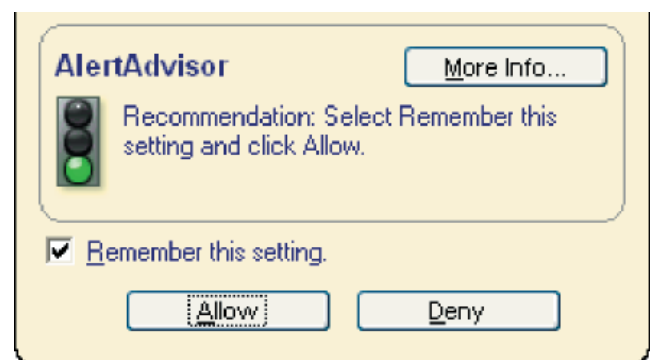

Automatic Program Configuration

- **New! Program AlertAdvisor** uses MD5 “fingerprinting” technology; tells you whether to allow/deny Internet access to programs requesting it, providing a safer and more user-friendly interface

- **Outbound Filtering** advises you when a program on your computer is trying to access the Internet and helps you avoid unauthorized and unknown programs from sending out your personal information

What is an MD5 signature?

An MD5 signature is the equivalent of a human fingerprint, but for computer programs. It is the process of sending a program through an algorithm that results in a unique message, or “fingerprint” for that specific program. No two MD5 signatures are identical.

Automatic Program Configuration identifies programs by their MD5 “fingerprint” and provides advice on whether to allow or deny the program access to the Internet

Antivirus Monitoring

- Alerts you when your antivirus is turned off or is out-of-date to help ensure your computer is always protected
- Works with Symantec, McAfee, Trend Micro, and Computer Associates antivirus products

Privacy and ID Theft Prevention

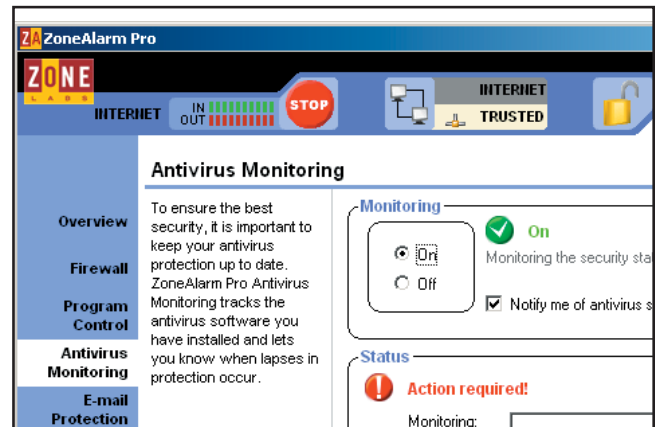

- **ID Lock** alerts you when personal data is about to leave your computer so that nothing gets out without your permission
- **Cookie Control** makes Web surfing private and convenient by blocking 3rd-party adware cookies while allowing “good” cookies
- **Ad Blocking** blocks pop-ups and pop-under ads to let you surf in peace
- **Cache Cleaner** makes your PC more efficient and helps protect your privacy by cleaning browser history and file clutter off your hard drive

Easy-to-Use

- **Pre-loaded Security Settings** provide easy, instant protection for anyone who wants “set and forget” security
- **Automatic Network Detection** ensures proper protection by identifying your computer's connection to a new network
- **Automatic Update Notification** keeps your security up-to-date by alerting you when Zone Labs has an update to ZoneAlarm Pro

Other Features

- **MailSafe** quarantines 47 types of suspicious e-mail attachments so you're protected from spreading e-mail-borne viruses
- **Outbound MailSafe** monitors outgoing e-mail for virus-like activity, such as sending an e-mail to everyone in your address book, and prevents such occurrences
- **Wireless Network Protection** detects when your computer connects to a wireless network, making wireless convenience safe and eliminating risks posed by wireless access
- **Hacker ID** helps you retaliate against hackers by tracking people who attack your PC and allowing you to report them to their ISP
- **Password Protection** prevents friends/family, or others who may use your computer, from tampering with the security settings

ZoneAlarm Pro's Antivirus Monitoring feature lets you know if your antivirus program is turned off or out-of-date to ensure your PC always has the highest level of protection.

Protect Your Business with ZoneAlarm Pro

Hackers and data thieves can find easy access to computers and networks that do not utilize a firewall. Many small businesses use routers or gateways to network their computers. While routers (sometimes called hardware firewalls) protect computers from incoming hackers, they do not protect against the multi-layered attacks often used by cybercriminals.

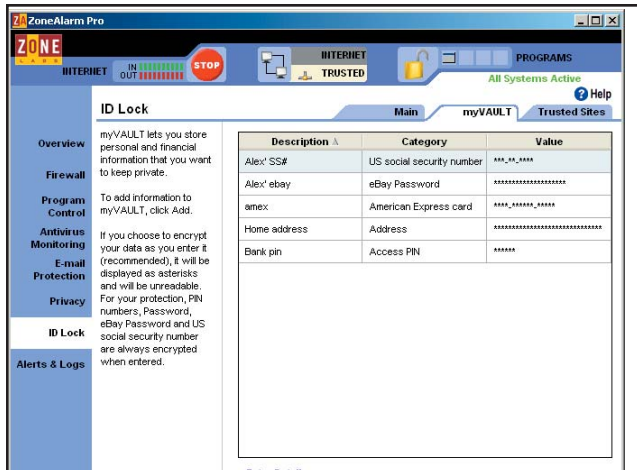

Software firewalls protect computers at all layers. They prevent incoming intrusions, as well as outbound attacks, such as malicious code from “phoning home,” and worms from sending out your personal information. Zone Labs recommends using a router and software firewall for the maximum protection from hackers and other intrusions.

Benefits of installing ZoneAlarm Pro on each computer in your network:

- All computers will be protected in your network, not just the entrance at the router or gateway
- MailSafe quarantines malicious e-mail attachments and keeps them from spreading to other computers in your network
- Protects your mobile employees by detecting new networks, even wireless networks, and automatically configuring VPNs
- Updates to ZoneAlarm Pro are automatically sent to each computer on your network alleviating worries around missing security updates
- Reduce IT support because of the intuitive user interface and Quick Start Tutorial

Zone Labs

ZoneAlarm Pro Datasheet

The ID Lock features allows you to enter personal information, such as your address, credit card number, banking accounts, and more, and protect it from "leaking" out of your computer without your permission.

The Experts Speak

"When you open that big fat pipe to the Net, you also create a potential autobahn into your PC for hackers and spyware. Luckily, ZoneAlarm Pro can stop both, and its ad blocking software smacked down just about every ad we came across."

– PC World, 2003

"ZoneAlarm Pro is as good as personal firewalls get."

– CNet, 2002

"ZoneAlarm Pro is simply one of the best firewall programs around."

– MSNBC, 2002

System Requirements

- Windows 98SE/ME/2000 Pro/XP
- 233 MHz Pentium or higher
- 50MB of available hard disk space
- Internet access
- Minimum system RAM: 48MB (98SE/ME), 64MB (2000 Pro), 128MB (XP)
- Supported protocols for email scanning
 - POP3 and IMAP4 for incoming
 - SMTP for outgoing
